SUMMARY

DevSecOps Engineer with hands-on experience in Microsoft Azure, Terraform, Docker, Kubernetes and CI/CD. I currently handle the complete deployment and server side of HungryKart, a live food delivery platform, where I take care of releases, database migrations, Linux server setup and production fixes on my own. I like automating repetitive work, keeping infrastructure in code and making deployments predictable and secure. Looking for a DevOps / DevSecOps role to work on cloud infrastructure at a larger scale.

EXPERIENCE

DevOps Engineer Intern – DevOps Insiders Feb 2026 – Present

- Working on Azure resources (Resource Groups, VNets, VMs, Storage Accounts, AKS, ACR) using Azure Portal, Azure CLI and Terraform.
- Set up Azure DevOps organization with Repos, Boards and multi-stage YAML pipelines, using service connections and variable groups to keep secrets out of code.
- Containerized applications with Docker, pushed images to Azure Container Registry and deployed them on AKS.
- Wrote reusable Terraform modules with remote state in Azure Storage and followed Git branching and PR-based workflow.

PROJECTS

HungryKart – Food Delivery Platform (End-to-End Deployment) GitHub

Docker, Docker Compose, Kubernetes (AKS), Terraform, GitHub Actions, ACR, Nginx, Ubuntu, PostgreSQL, Redis

- Deployed and manage a live platform with a FastAPI backend, Next.js admin panel and 3 Flutter apps (customer, restaurant, delivery agent).
- Containerized backend, admin panel and Redis with Docker Compose on an Ubuntu server; handle every release including rebuild, Alembic DB migrations and health checks.
- Provisioned AKS and Azure Container Registry with Terraform and set up a GitHub Actions pipeline to build, push and deploy images.
- Secured the server with a non-login service user, limited sudo access, SSH key login, Nginx reverse proxy, SSL/TLS and secrets kept only in env files.
- Built and shipped admin features like pricing and GST settings, delivery agent incentives and menu management for super admins.
- Generate signed release builds of the Android apps and publish them on the Google Play Store.

Automated Multi-Environment Web App Deployment on Azure GitHub

Terraform, GitHub Actions, Docker, AKS, ACR, NGINX

- Created separate dev and prod environments on Azure using Terraform modules and variables.
- GitHub Actions pipeline builds the Docker image, pushes it to ACR and deploys it to AKS behind NGINX.

Azure Landing Zone Deployment GitHub

Terraform, Azure CLI, Azure Policy, RBAC

- Built a basic landing zone with resource groups, hub and spoke VNets, NSGs, role assignments and policies using Terraform.

TECHNICAL SKILLS

Cloud	Microsoft Azure (VMs, VNet, NSG, Storage, AKS, ACR, Load Balancer, App Gateway), Azure CLI
Infrastructure as Code	Terraform (modules, remote state, workspaces)
CI/CD	Azure DevOps (Organization, Repos, Boards, YAML Pipelines), GitHub Actions
Containers	Docker, Docker Compose, Kubernetes (AKS)
OS, Scripting & Git	Linux (Ubuntu), Windows Server, Bash, PowerShell, Git, GitHub
Security & Others	SSH hardening, RBAC, Secrets Management, Nginx, SSL/TLS, Least Privilege Access, PostgreSQL, Redis

EDUCATION

Bachelor of Computer Applications (BCA) – Integral University, Lucknow
